

## 3 Channel DC/DC Converters IC with High-Efficiency Step-Up and Step-Down

### General Description

The RT9907 is a three channel power-supply solution for digital still cameras and other battery-powered devices. It integrates an asynchronous step-up and two synchronous step-down DC-DC converters. The RT9907 is targeted for applications that use two AA cells or a single lithium-ion battery.

The three DC-DC converters (CH1, CH2, CH3) accept input voltage from 1.5V to 5.5V. Each DC-DC converter has better transient response and excellent stability by providing current-mode control and external compensation network. With built-in Internal MOSFET and up to 1.4MHz operating frequency, the RT9907 allows minimum BOM cost and PCB area.

The step-down DC-DC converters (CH2, CH3) can regulate output voltage as low as 0.8V. Three operational modes are available: PWM, PSM, Low-Dropout modes. At PWM mode, Internal synchronous rectifier with low  $R_{DS(ON)}$  dramatically reduces conduction loss and achieve 94% efficiency. It enters Low-Dropout mode when normal PWM cannot provide regulated output voltage by continuously turning on the upper P-MOSFET. No external Schottky diode is required in practical application.

Each DC-DC converter has independent enable input and soft-start function allowing versatile power sequence combination. Complete protection functions are implemented such as short circuit, over-voltage protection.

The RT9907 is available in small VQFN-24L 4x4 package.

### Ordering Information

RT9907 □ □

- Package Type  
QV : VQFN-24L 4x4 (V-Type)  
(Exposed Pad-Option 1)
- Lead Plating System  
P : Pb Free  
G : Green (Halogen Free and Pb Free)

Note :

Richtek products are :

- ▶ RoHS compliant and compatible with the current requirements of IPC/JEDEC J-STD-020.
- ▶ Suitable for use in SnPb or Pb-free soldering processes.

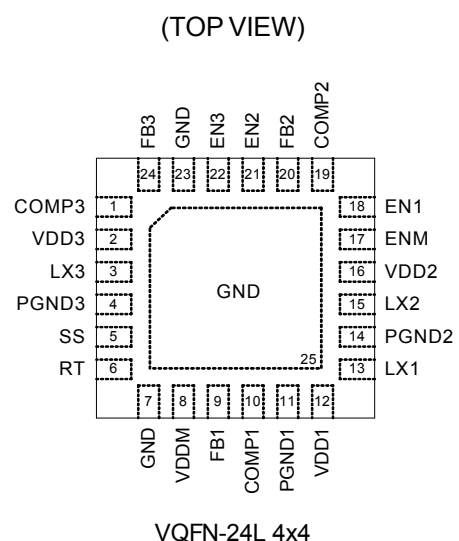

### Features

- 1.5V to 5.5V Battery Input Voltage Range
- Main step-up DC-DC Converter
  - ▶ 1.5V to 5.5V Adjustable Output Voltage
  - ▶ Up to 90% Efficiency
  - ▶ 2.6A, 0.3Ω Internal Power Switch
- Two Step-Down DC-DC Converters
  - ▶ 0.8V to 5.5V Adjustable Output Voltage
  - ▶ 94% Efficiency
  - ▶ 100% Duty Cycle
- Up to 1.4MHz Switching Frequency
- 1uA Supply Current in Shutdown Mode
- Programmable Soft Start Function
- Independent Enable Pin (CH1, CH2, CH3)
- External Compensation Network (CH1, CH2, CH3)
- Short Circuit Protection (CH1, CH2, CH3)
- Over Voltage Protection (CH2)
- 24-Lead VQFN Package
- RoHS Compliant and 100% Lead (Pb)-Free

### Applications

- Digital Still Camera
- PDAs
- Portable Device

### Pin Configurations

## Typical Application Circuit

1-cell Li+ Battery 3.4V to 4.2V

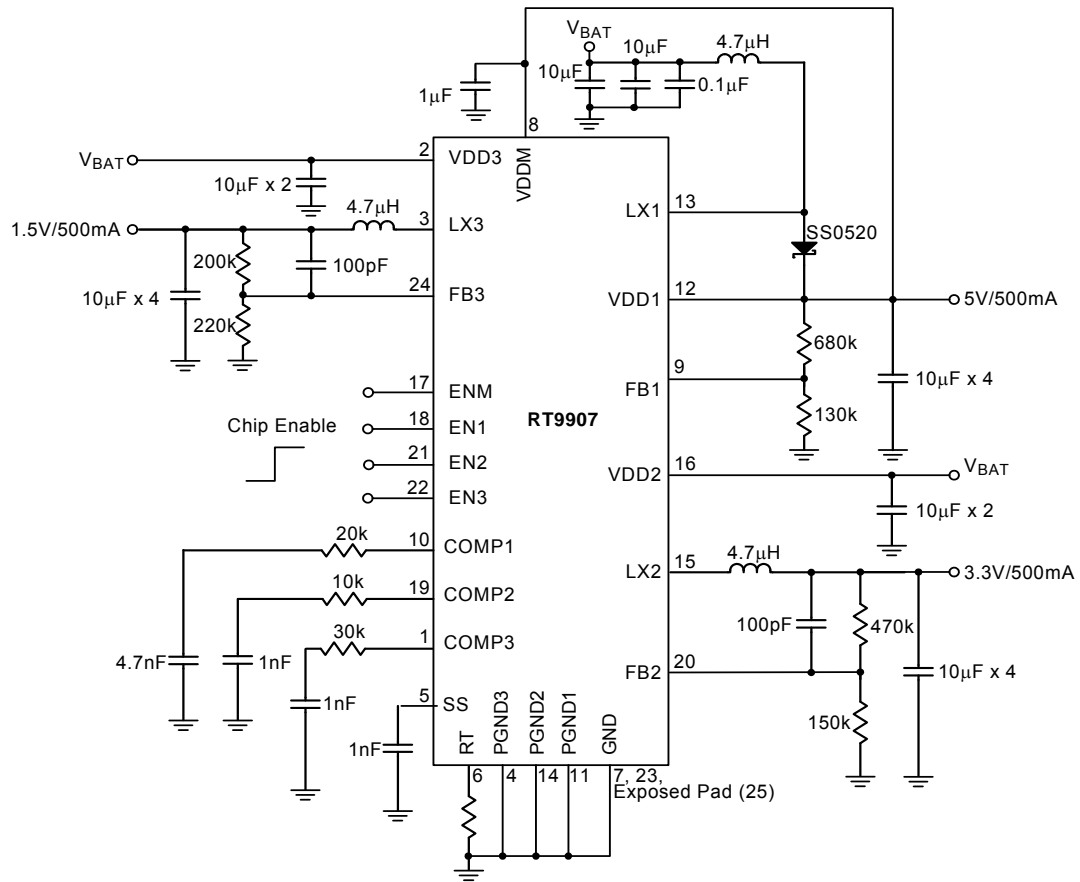

Figure 1. Typical Application Circuit for 1-cell Li+ Battery

2-AA Battery 1.8V to 3.2V

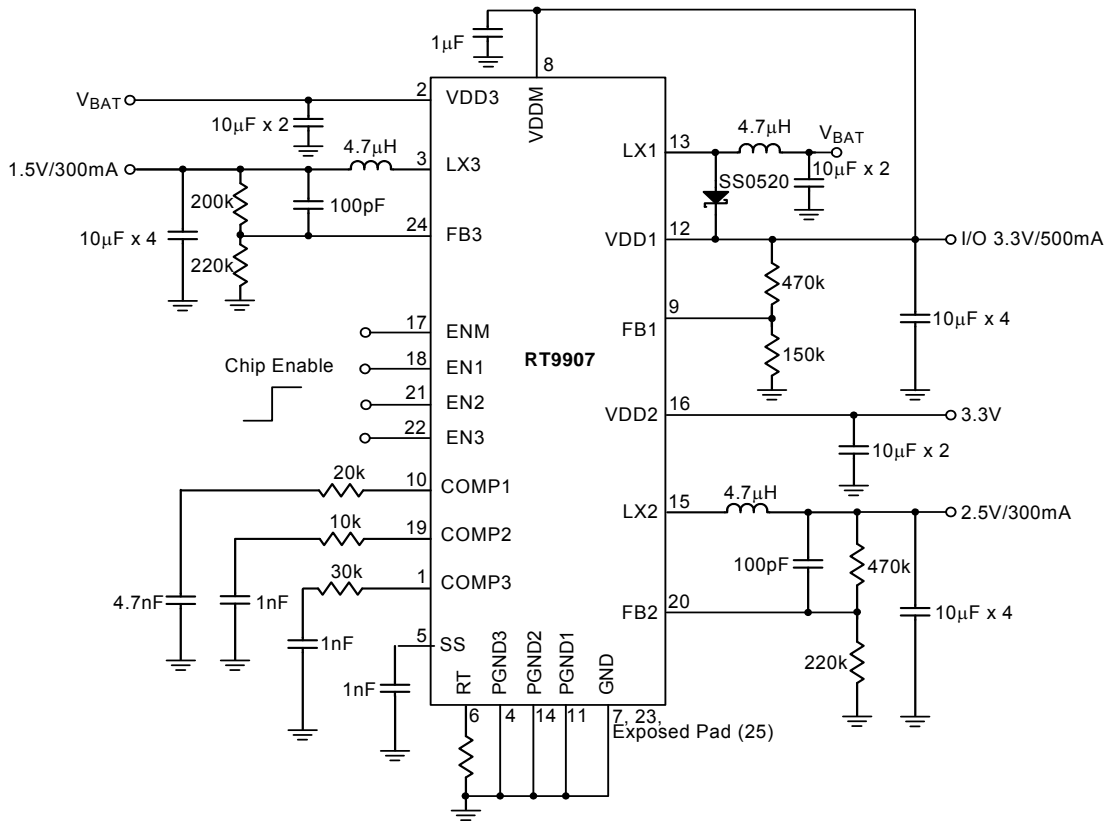

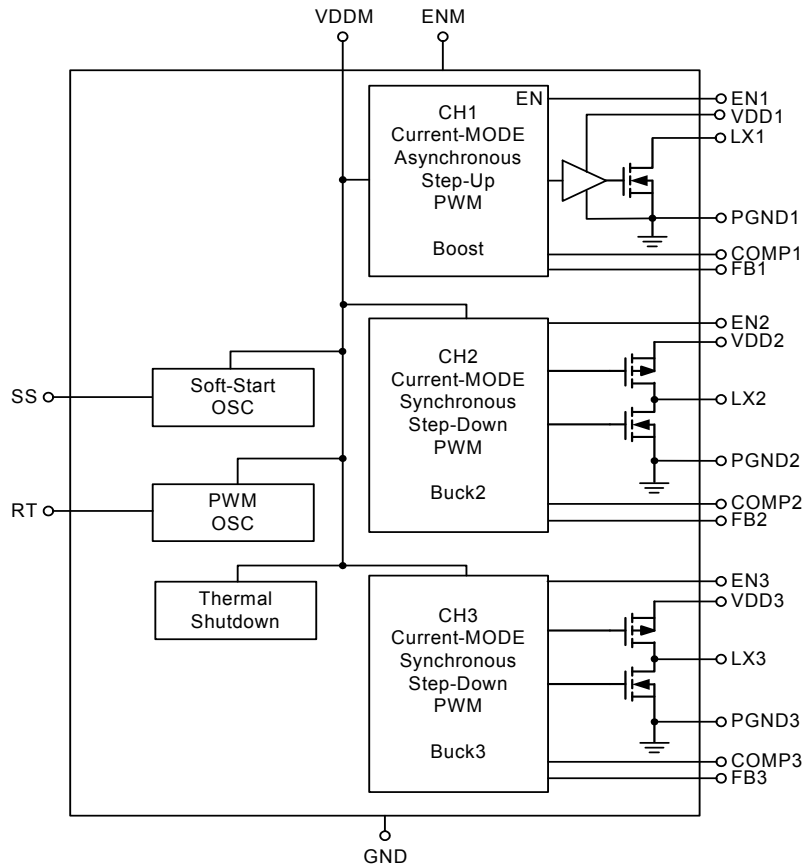

Figure 2. Typical Application Circuit for 2-AA Battery Supply

Function Block Diagram

ENM	EN1	EN2	EN3	CH1	CH2	CH3
0	X	X	X	Off	Off	Off
1	0	0	0	Off	Off	Off
1	1	0	0	On	Off	Off
1	1	1	0	On	On	Off
1	1	1	1	On	On	On

**Functional Pin Description**

Pin No.	Pin Name	Pin Function
1	COMP3	CH3 Feedback Compensation Pin.
2	VDD3	CH3 Power Input Pin.
3	LX3	CH3 Switch Node. Drains of the internal P-MOSFET and N-MOSFET switches. Connect an inductor to LX3 pins together as close as possible.
4	PGND3	Power Ground for CH3.
5	SS	Sets the Soft Start interval of the converter. Connect a capacitor from this pin to ground.
6	RT	Frequency setting resistor connection pin. Frequency is 500kHz if RT pin not connected
7, 23	GND	Analog Ground.
8	VDDM	Device Input Power Pin.
9	FB1	CH1 Feedback Input Pin.
10	COMP1	CH1 Feedback Compensation Pin.
11	PGND1	Power Ground for CH1
12	VDD1	CH1 Power Input Pin. Connect output of Boost to this pin.
13	LX1	CH1 Switch Node. Connect an inductor to LX1 Pins together as close as possible.
14	PGND2	Power Ground for CH2.
15	LX2	CH2 Switch Node. Drains of the internal P-Channel and N-MOSFET switches. Connect an inductor to LX2 pins together as close as possible.
16	VDD2	CH2 Power Input Pin.
17	ENM	Whole Device Control Pin. Tie this pin higher than 1.3V to enable the device. Tie below 0.4V to turn off the device.
18	EN1	CH1 Enable Input. Tie this pin higher than 1.3V to enable CH1. Tie below 0.4V to turn off the CH1.
19	COMP2	CH2 Feedback Compensation Pin.
20	FB2	CH2 Feedback Input.
21	EN2	CH2 Enable Input. Tie this pin higher than 1.3V to enable CH2. Tie below 0.4V to turn off the CH2.
22	EN3	CH3 Enable Input. Tie this pin higher than 1.3V to enable CH3. Tie below 0.4V to turn off the CH3.
24	FB3	CH3 Feedback Input.
25 (Exposed Pad)	GND	The exposed pad must be soldered to a large PCB and connected to GND for maximum power dissipation.

## Absolute Maximum Ratings (Note 1)

- Supply Input Voltage, VDDM, VDD1, VDD2, VDD3 ----- -0.3 to 7V
- LX1 Pin Switch Voltage ----- -0.3V to 7V
- LX2 Pin Switch Voltage ----- -0.3V to (V<sub>DD2</sub> + 0.3V)
- LX3 Pin Switch Voltage ----- -0.3V to (V<sub>DD3</sub> + 0.3V)
- Other I/O Pin Voltage ----- -0.3V to (V<sub>DDM</sub> + 0.3V)
- Power Dissipation, P<sub>D</sub> @ T<sub>A</sub> = 25°C
  - VQFN-24L 4x4 ----- 1.85W
- Package Thermal Resistance (Note 2)
  - VQFN-24L 4x4, θ<sub>JA</sub> ----- 54°C/W
- Junction Temperature Range ----- -40°C to 125°C
- Lead Temperature (Soldering, 10 sec.) ----- 260°C
- Operation Temperature Range ----- -40°C to 85°C
- Storage Temperature Range ----- -65°C to 150°C
- ESD Susceptibility (Note 3)
  - HBM (Human Body Mode) ----- 2kV
  - MM (Machine Mode) ----- 200V

## Electrical Characteristics

(V<sub>DDM</sub> = 3.3V, T<sub>A</sub> = 25°C, Unless Otherwise specification)

Parameter	Symbol	Test Conditions	Min	Typ	Max	Unit
<b>Supply Voltage</b>						
Minimum Startup Voltage (Boost)	V <sub>ST</sub>	Boost loading < 1mA	–	1.5	--	V

<b>Control</b>						
ENM, EN1, EN2, EN3 Input High Level Threshold		V <sub>VDDM</sub> = 3.3V	--	0.8	1.3	V
ENM, EN1, EN2, EN3 Input Low Level Threshold		V <sub>VDDM</sub> = 3.3V	0.4	0.8	--	V
<b>Thermal Protection</b>						
Thermal Shutdown	T <sub>SD</sub>		140	180	--	°C
Thermal Shutdown Hysteresis	ΔT <sub>SD</sub>		--	10	--	°C

**Note 1.** Stresses listed as the above "Absolute Maximum Ratings" may cause permanent damage to the device. These are for stress ratings. Functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may remain possibility to affect device reliability.

**Note 2.** θ<sub>JA</sub> is measured in the natural convection at T<sub>A</sub> = 25°C on a low effective thermal conductivity test board of JEDEC 51-3 thermal measurement standard.

**Note 3.** Devices are ESD sensitive. Handling precaution is recommended.

**Application Information**

The RT9907 is a three-channel DC/DC converter with one voltage detector for digital still cameras and other hand-held device. The three channels DC/DC converters are as follows:

CH1: Step-up, asynchronous current mode DC/DC converter with an internal power MOSFET, current limit protection and high efficiency control for wide loading range.

CH2: Step-down, synchronous current mode DC/DC converter with internal power MOSFETs, current limit, short-circuit, over voltage protection and high efficiency control for wide loading range.

CH3: Step-down, synchronous current mode DC/DC converter with internal power MOSFETs, current limit, short-circuit protection and high efficiency control for wide loading range.

**Soft-Start**

CH1, CH2 and CH3 can be soft-started individually every time when the channel is enabled. Soft-start is achieved by ramping up the voltage reference of each channel's input of error amplifier. Adding a capacitor on SS pin to ground sets the ramping up speed of each voltage reference. Triangle wave will be appeared on SS pin, which provides a clock base for soft-start.

The soft-start timing would be setted by following formular.

$$T_{SS} = 10 \times \frac{C_{SS}}{1nF} \text{ (ms)}$$

**Oscillator**

The internal oscillator synchronizes CH1, CH2 and CH3 PWM operation frequency. The operation frequency is set by a resistor between RT pin to ground, ranging from 550kHz to 1.4MHz.

**Step-up (Boost) DC/DC Converter (CH1)**

The step-up channel (CH1) is designed as current-mode DC/DC PWM converters with built-in internal power MOS and external Schottky diode. Output voltage is regulated and adjustable up to 5.5V. This channel typically supplies 3.3V for main system power.

At light load, efficiency is enhanced by pulse-skipping

mode. In this mode, the N-MOSFET turns on by a constant pulse width. As loading increased, the converter operates at constant frequency PWM mode. The max. duty of the constant frequency is 80% for the boost to prevent high input current drawn from input.

**Protection**

**Current limit**

The current of NMOS is sensed cycle by cycle to prevent over current. If the current is higher than 2.6A (typical), then the NMOS is off. This state is latched and then reset automatically at next clock cycle.

**Under Voltage**

The status of under voltage is decided by comparing FB1 voltage with 0.4V. This function is enabled after soft start finishes. If the FB1 voltage is less than 0.4V, then the NMOS will be turned off immediately. And this state is latched. After a dummy count period, the controller begins a re-soft-start procedure.

If the status of under voltage remains after 4 successive times of soft-start, then CH1 is latched.

**Over Voltage**

The over voltage protection is used when the output of CH1 supplies the power of the main chip. If the output voltage of CH1 is over 6.5V, the main chip is shutdown and the N-MOSFET is kept off.

**Step-Down (Buck) DC/DC Converter (CH2, CH3)**

The step-down channels (CH2, CH3) are designed as synchronous current-mode DC/DC PWM converters. Output voltage is regulated and adjustable down to 0.8V. The internal synchronous power switches eliminate the typical Schottky free wheeling diode and improve efficiency.

At light load, efficiency is enhanced by pulse-skipping mode. In this mode, the high-side P-MOSFET turns on by a constant pulse width. As loading increased, the converter operates at constant frequency PWM mode. While the input voltage is close to output voltage, the converter enters low dropout mode. Duty could be as long as 100% to extend battery life.

## Protection

### Current limit (CH2, CH3)

The current of high-side P-MOSFET is sensed cycle by cycle to prevent over current. If the current is higher than 1.5A (typical), then the high-side P-MOSFET is off and the low-side N-MOSFET is on. This state is latched and then reset automatically at next clock cycle.

### Under Voltage (CH2, CH3)

The status of under voltage is decided by comparing FB2 (or FB3) voltage with 0.4V. This function is enabled after soft start finishes. If the FB2 (or FB3) voltage is less than 0.4V, then the high/low-side Power MOS are turned off immediately. And this state is latched. After a dummy count period, the CH2 (or CH3) begins a soft-start procedure.

However, if the status of under voltage remains after 3 successive times of soft-start, then CH2 (or CH3) is latched.

	UV remain after 3 successive soft-start	How to reset?
CH2	CH2 is latched, and whole IC is shut down	Toggle ENM
CH3	CH3 is latched	Toggle EN3 or ENM

### Over Voltage Protection (CH2)

Over voltage protection (OVP) is used to protect the external parts connected to the output of CH2. If the FB2 voltage is higher than 1V, the high-side P-MOSFET is off and low-side N-MOSFET is on. This status is latched and could be reset by toggling ENM.

## Reference

The chip has an internal 0.8V reference voltage, which is the inputs of the error amplifiers of the CH1, CH2, and CH3 to compare the difference of feedback voltage. The reference voltage can be set up stably when the supplied power (VDDM) is above 1.5V, and EN1 (or EN2, EN3) goes high.

## Thermal Protection

Thermal protection function is integrated in the chip. When the chip temperature is higher than 180°C, the controllers of CH1, CH2, and CH3 are shutdown. 10 degree C is the hysteresis range of temperature to prevent unstable operation when the thermal protection happens. When the thermal protection is relieved, the chip operates well again.
